## Software Developer

Cell: +1(281) 630 7169 | Mail: yanngilbertone@gmail.com

### AREAS OF EXPERTISE

**Devops and Automation:** CI/CD, API Integration, Task automation

**Infrastructure and OS:** Windows Server Administration, Cloud Infrastructure (AWS/Azure), Database Management (SQL Server, MySQL, CassandraDB)

**Development:** C#, PHP, Python, JavaScript, SQL, HTML, CSS

**Tools:** Jira, Confluence, GitHub, Microsoft Visual Studio

**Methodologies:** Agile, Scrum, Debugging and Troubleshooting

### LANGUAGE

*French (Native language)*

*English (Native-like proficiency)*

*Spanish (Conversational)*

### ACADEMIC QUALIFICATIONS

Master of Science in Artificial Intelligence

Colorado State University

**Expected Completion September 2026**

Bachelor of Science IT

University of Phoenix, Arizona

**2019**

### KEY SKILLS AND COMPETENCIES

- Strong interest in DevOps and system compliance.
- Proven ability to migrate legacy codebases to current industry standards to reduce technical debt.
- Expertise in SQL database management.
- Solid experience of Windows server administration.
- Experienced in Agile environments and their implementations including workflows.

### PERSONAL SUMMARY

An ambitious and qualified Software Engineer with interests in DevOps, with experience in automation, cloud infrastructure monitoring and system administration. Currently pursuing a Master's in AI to integrate intelligent automation into operational workflows. Experienced in migrating legacy codebases as well as implementing high-availability monitoring solutions.

### EMPLOYMENT HISTORY

#### Seafrigo USA Logistics

*FULL-STACK SOFTWARE DEVELOPER*

2022 - 2024

Led the development, maintenance, and support of websites and applications.

#### **Duties and responsibilities:**

- Work closely with product owners to define new and updated features, provide management with project status, risk and cost analysis.
- Used PHP and JavaScript to develop new applications and features within an existing codebase.
- Developed a pipeline between the HR systems and Active Directory to sync data using APIs.
- Implemented Jira workflow for our support team.
- Devised the roadmap and led the migration of the codebase from older versions of PHP and SQL Server to current industry standards in order to reduce technical debt.
- Defined and initialized confluence documentation for all systems to provide concise explanations of our applications for both technical and end users.

#### CEVA Logistics

*QUALITY ASSURANCE ENGINEER*

2020 – 2022

Worked with a multi-location development team to improve testing tools, allowing larger scope of testing and better reliability.

#### **Duties and responsibilities:**

- Designed and executed robust test automation suites using SoapUI and Postman.
- Leveraged Cassandra Database to implement Jira TestRails, standardizing test data management and campaign deployment.

#### HP Inc.

*SOFTWARE DEVELOPER*

2018 - 2019

Primarily focused on the development of tools related to translation management, and cloud infrastructure health monitoring and reporting.

#### **Duties and responsibilities:**

- Developed projects mainly using C#, SQL, and JSON.
- Practiced Agile methodologies.
- Worked with SQL Server and MySQL databases.
- Fully integrated into the development team and participated in team culture.
- Implemented high availability services to monitor API's and publish data to a real-time dashboard.
