

YANN GILBERT

Software Developer | Master's in AI & Machine Learning Candidate

Houston, TX (open to relocation) • +1 (281) 630-7169 • yanngilbertone@gmail.com

PROFILE

Software Developer completing a Master's degree in Artificial Intelligence, combining a strong foundation in full-stack development, systems integration, and cloud infrastructure with hands-on experience building machine learning models, computer vision pipelines, and agentic AI systems. Skilled at modernizing legacy systems and delivering scalable applications, now applying that same rigor to intelligent, data-driven solutions.

AI & MACHINE LEARNING PROJECTS

Meal-Prep & Weight-Loss Chatbot — Python, Sentence-Transformers, NLP

- Built a retrieval-based conversational AI agent that uses sentence-embedding similarity search over a 500+ pair intent corpus to deliver personalized meal-planning guidance

Face Detection & Anonymization Pipeline — Python, OpenCV, Computer Vision

- Developed a computer vision pipeline with tuned Haar cascade detectors to automatically detect and anonymize faces across varied image conditions

BakeryMind — Agentic Operations Planner — Python, Random Forest, STRIPS Planning

- Designed a multi-component agentic AI system combining demand forecasting, a rule-based reasoning engine, hill-climbing optimization, and automated planning to autonomously sequence bakery operations

CORE SKILLS

AI & Machine Learning: Machine Learning, Agentic AI Systems, Computer Vision, NLP, Scikit-learn, OpenCV, TensorFlow/Keras
Languages & Development: C#, PHP, Python, JavaScript, SQL, HTML, CSS
Cloud & Infrastructure: AWS, Azure, Windows Server Administration, Database Management (SQL Server, MySQL, CassandraDB)
Tools & Practices: Agile/Scrum, CI/CD, API Integration & Automation, Jira, Confluence, GitHub

EXPERIENCE

Full-Stack Software Developer | Seafrigo USA Logistics

2022 – 2024

- Led development, maintenance, and support of internal and customer-facing web applications
- Partnered with product owners to define new features and communicated project status, risk, and cost analysis to leadership
- Designed an API-driven integration pipeline to sync data between HR systems and Active Directory
- Directed the migration of a legacy PHP and SQL Server codebase to current industry standards, reducing technical debt
- Established Confluence documentation standards, improving knowledge sharing for technical and non-technical stakeholders

Quality Assurance Engineer | CEVA Logistics

2020 – 2022

- Partnered with a multi-location development team to expand test coverage and improve product reliability
- Designed and executed automated test suites using SoapUI and Postman
- Implemented Cassandra-backed test data management in Jira TestRail, standardizing test campaign deployment

Software Developer | HP Inc.

2018 – 2019

- Developed internal tools for translation management and infrastructure monitoring using C#, SQL, and JSON
- Built high-availability services that monitored API health and published real-time data to dashboards
- Worked across SQL Server and MySQL databases to support application data needs

EDUCATION

Master of Science in Artificial Intelligence (Current GPA 3.9)

Expected September 2026

Colorado State University

Bachelor of Science in Information Technology

2019

University of Phoenix, Arizona

LANGUAGES

English • French (Native-like proficiency) • Spanish (Conversational)
